

SolidDrive®

Sound Without Speakers™

SolidDrive® transforms any solid surface into a sound source

- **Produce Sound From Any Solid Surface.**

The powerful SolidDrive is a hidden planar-source audio transducer that directly transfers acoustic energy to the surface, creating a large and dynamic sound field.

- **Get smooth, even coverage.**

SolidDrive resonates over 15 feet of surface area per unit in a drywall installation, but the sound it produces travels even further.

- **Connect It Like A Speaker.**

SolidDrive requires no special equipment to function - It connects to any conventional amplifier or receiver using standard speaker wire.

- **Features Unique Patented Technology**

SolidDrive's patented, dual opposing motors in a single drive will enable efficiency with high power handling.

- **Safe, Strong, And Designed To Last**

SolidDrive is UL 1480 and UL 2043 listed, meaning it meets the most stringent safety requirements for use in any home or business.

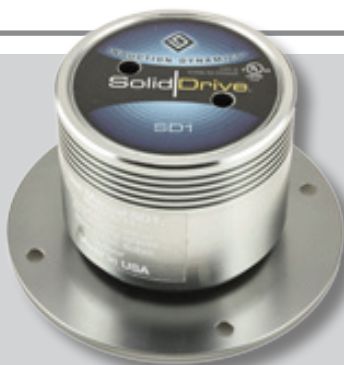

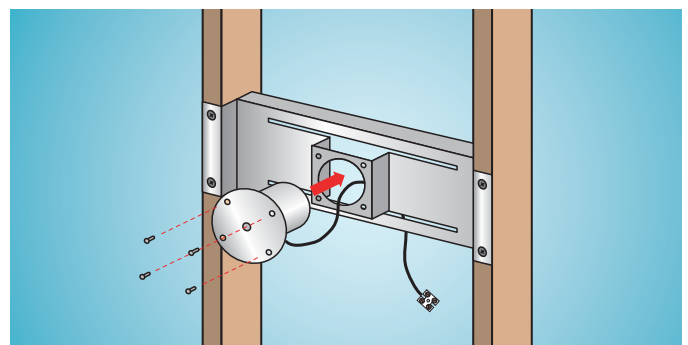

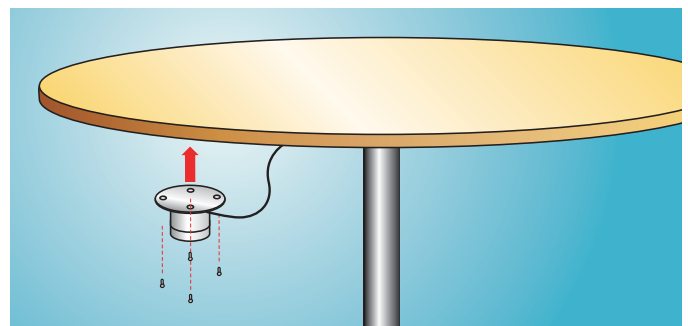

- **Integrated Transformer Option**

The -T version has an integrated transformer that allows SolidDrive to be used in a 70.7V/100V distributed audio system.

Sound-Masking Transducers

SolidDrive also offers sound masking solutions

- Introduces a constant, unobtrusive noise that "masks" distracting sounds and conversations
- SolidDrive needs only one unit per 15 feet of space, and delivers much smoother coverage
- Easy to install, uses less amplification than other masking systems

SolidDrive® is the solution for invisible sound, providing a hidden sound source for in-wall, surface mount and glass applications. Unique technology transforms surfaces into sound-producing planes that blanket whole rooms with quality audio.
